

Lec 7

- Problem of Noise Coupling
- Differential Signals
- Differential Pair

Electrocardiogram System (ECG)

Differential Signals:

- they vary by equal and opposite amounts
- they have the same DC value

Not differential

$$V_1(t) = V_0 \sin \omega t + V_{cm}$$

$$V_2(t) = -V_0 \sin \omega t + V_{cm}$$

Example

Determine the peak and V_{pp} of $V_1(t)$, $V_2(t)$, $V_1 - V_2$

	V_1	V_2	$V_1 - V_2$
Peak Amplitude	V_0	V_0	$2V_0$
V_{pp}	$2V_0$	$2V_0$	$4V_0$

How do we generate differential signals?

The Differential Pair

Review of CE stage

$$I_C = I_S \exp \frac{V_b}{V_T}$$

$$V_{CC} = I_C R_C + V_{out}$$

$$V_{out} = V_{CC} - I_C R_C$$
